

3A Ultra Low Dropout Linear Regulator

FEATURES

- Guaranteed 3A Output Current
- Low Ground Current
- 0.5 μ A Quiescent Current in Shutdown
- Fixed Output Voltage of 1.5V, 1.8V, 2.5V, 3.3V
- Fast Transient Response
- Current Limit and Thermal Limit
- Available in SOT-223, TO-220, TO-263 TO-263-5, TO-252 and TO-252-5 Packages

APPLICATIONS

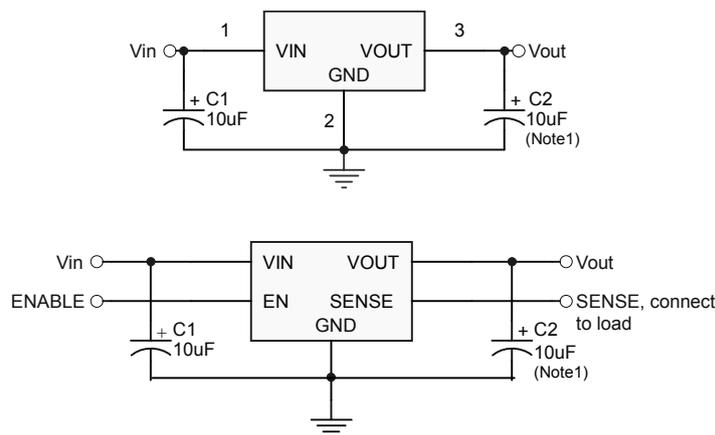

- Mother Board and Notebook
- Gigabit Ethernet Switch
- Microprocessor Power Systems
- Network Cards
- Peripheral Cards
- GTL, GTL+, BTL, and SSTL Bus Terminators
- DSPs Power Supplies
- Battery Powered Applications

DESCRIPTION

The AIC1185 is an ultra low dropout and high performance linear regulator with 3A output current capability. The output voltage is fixed 1.5V, 1.8V, 2.5V and 3.3V. Its low dropout voltage and fast transient response make it ideal for low voltage microprocessor applications.

In addition, the enable pin reduces power dissipation at shutdown mode. Current limit and thermal protection provide protection against any overload condition that would create excessive junction temperatures.

APPLICATION INFORMATIONS

Input/Output Capacitors

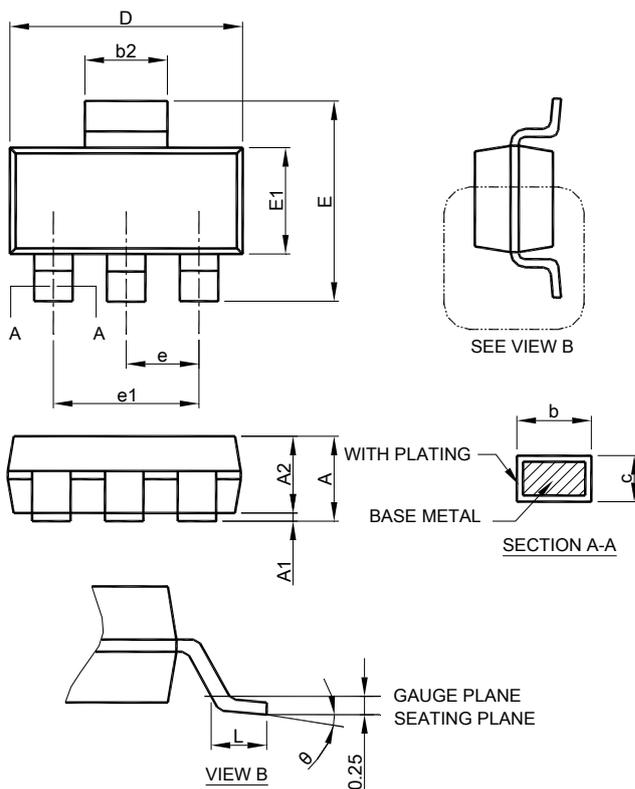

Linear regulators require input and output capacitors to maintain stability. A 4.7 μ F or 10 μ F electrolytic or tantalum output capacitor is recommended. To avoid oscillation, it is recommended to follow the figures of "Region of Stable C_{OUT} ESR vs. Load Current" to choose proper capacitor specifications.

Sense

Load is not usually close to regulator in actual application. The distance between these two devices results in decay of the load. A SENSE pin of the regulator connects to the load and traces the load voltage. AIC1185 will adjust the output voltage of the regulator to maintain the load at expected voltage.
